

Windows 7 Installation Instructions for CyberQ II

Installing the application (this is the same as in Xp and Vista):

Place the CyberQII control interface into your CDROM Drive -> click run setup -> Click Yes -> Click Next -> Click Next -> Click Next -> Click Close.

Installing the USB Driver (have the CyberQII control interface CD in your CD drive):

Plug the Cyber QII into the USB port -> Error "device driver software was not successfully installed" may appear; To force install:

1) ENTER DEVICE MANAGER:

- A) Click on the round windows icon at the lower left hand corner of your desktop
- B) In the search field, type "device manager"
- C) In the list above click device manager

2) ENTER CYBERQII PROPOERTIES AND UPDATE DRIVER

- A) Under other devices, double click the "CYBERQ II !" to enter properties
- B) Click Update Driver
- C) Click Browse my computer...
- D) Click browse and select the CD ROM drive showing the BBQ GURU logo -> Click OK
- E) Click Next
- F) Windows Security will prompt you if you want to install this device software -> Click Install
- G) The window should display Installing Driver Software
- H) The window should show "Windows has successfully updated your driver software...Communications Port"

Your USB driver is successfully installed for the USB port you have the CYBER QII connected to. If you move the CYBER QII to a different USB port, you may have to repeat this process.

You may now click on the application and it will connect to your CYBERQII!
